

ROADASSIST: INSTANT VEHICLE BREAKDOWN HELP WITH EMERGENCY SERVICES AND MECHANIC CONNECTIVITY

ABSTRACT

RoadAssist is an innovative mobile application designed to provide real-time assistance to vehicle owners experiencing breakdowns, particularly in unfamiliar or remote locations. The app connects users with nearby, experienced mechanics through live location tracking, ensuring that help is never far away. In addition to mechanic connectivity, RoadAssist offers Emergency Services such as towing support, access to nearby service stations, and troubleshooting guides for minor vehicle issues, empowering users to address problems promptly.

The app's Mechanic Authentication and Review System ensures that users can rely on experienced professionals, regardless of formal education, who have submitted verified credentials, including photos, licenses, a clean criminal record, and a strong reputation based on user feedback and ratings, fostering trust and safety in emergency situations. An intuitive SOS Feature allows users to instantly alert emergency contacts and nearby mechanics with their location, enhancing safety during breakdowns in high-risk areas.

By integrating real-time GPS tracking and user-friendly interfaces, RoadAssist enhances the overall breakdown assistance experience, providing a fast and reliable solution. This project aims to transform the way vehicle breakdowns are managed, ensuring swift responses and seamless connectivity between users and mechanics, while also offering essential support services during emergencies.
